METAL WALL AND ROOF PANELS

Featuring a Galvalume® Substrate and Kynar 500® Coating

*Timeless
McElroy
Quality*

Your building can't be any better than the materials that go into it. When you specify MESA panels from McElroy Metal, you are assured of the best. MESA, simply stated, is the finest panel in the industry with the credentials to prove it. Top to bottom, MESA quality is unsurpassed. From its bold new profile and its seamless appearance, MESA brings a refreshing new style to post-frame construction.

Professional Builder Grade Panels

MESA was designed for professional builders that are concerned about long-term quality and performance of their projects. MESA is *only* available with the industry's best substrate and coating system - Galvalume® and Kynar 500®. Galvalume substrates are proven to provide better long-term performance than galvanized. In fact, Galvalume is the only substrate in the industry warranted by steel mills against perforation. Kynar 500 coatings are the most fade and chalk resistant paint systems available. Colors stay bright and vibrant for decades. This combination of Galvalume steel substrate and Kynar 500 coating offers unsurpassed performance in a steel panel.

Be An Educated Consumer

All metal panels are not created equal. While many panels may visually look identical, their long-term performance will vary greatly. There are many inferior panels with lower-quality substrates and coatings available in the marketplace. Be sure to ask your contractor or supplier what substrate and coating they are proposing for your project. If they don't know, that may be a red flag.

Copyright and Patent Protected

McElroy Metal has copyright and patent protection for MESA's profile and unique lap design. MESA panels achieve a clean visual appearance without highly visible lap lines. With MESA, consumers are assured their projects won't contain look-alike panels with inferior substrates or coatings.
