

Wave Fixed or Floating Panels

Available in both fixed and floating systems, McElroy Metal's Wave panels are concealed-fastener wall panels that install vertically or horizontally over solid substrate or subframing. Wave Fixed uses an integral fastening flange roll-formed into the panel and suits lengths of 40 or less; Wave Floating uses separate clips and should be specified for lengths of 40 or greater.

WAVE FIXED SEAM ENGAGEMENT

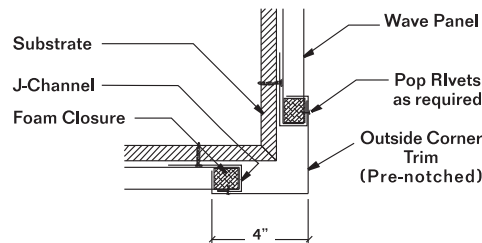

WAVE FLOATING SEAM ENGAGEMENT
WAVE FLOATING UTILIZES SEPARATE CLIPS
(SUBSTRATE & FOAM CLOSURES NOT SHOWN FOR CLARITY)

PRE-NOTCHED WAVE FLASHING

Pre-notched transition flashings allow for thermal expansion and contraction while providing an attractive finishing detail. Pre-notched corner flashing is also available.
