

Kynar 500[®] (PVDF) vs SMP

Both Kynar 500[®] (PVDF) and Silicone Modified Polyester (SMP) panels were installed on this Louisiana residence pictured to the right.

On day one, colors were identical. Photo taken less than eight (8) years later shows fading and chalking of the Silicone Modified Polyester (SMP) panels. Note, no fade or chalking of the darker Kynar 500[®] (PVDF) panels.

This building addition dramatically illustrates the superior performance of Kynar 500[®] (PVDF). This building was built in two phases, **nine years apart**. Note, no color difference in the two sections of the roof. No fade! No chalk!

McElroy panels keep their fresh, bright, "new building" look far longer than ordinary panels, thanks to high-performance Kynar 500[®] (PVDF) coatings. Years later, your McElroy metal roof will look sharp, still resist fading, chalking and environmental elements.

Specify McElroy Kynar 500[®] (PVDF) coated panels and be sure. Years from now, you'll thank us!
