

## McElroy Metal Recycled Content Statement

Recycled content reflects the percentage of recycled materials used in a finished product. To better understand the values below, it helps to know the difference between **pre-consumer** and **post-consumer** recycled content:

- **Pre-Consumer:** Materials recycled before reaching the end user—often byproducts of manufacturing processes.  
*Example:* Fly ash generated by coal-fired plants and reused in cement production.
- **Post-Consumer:** Materials recycled after use by the end customer.  
*Example:* Scrap steel from recycled automobiles.

The recycled content in McElroy Metal roofing, siding, and substructural products varies by manufacturing location and supplier, but averages:

Recycled Scrap	Post-Consumer	Pre-Consumer
22%	9.8%	13%
